

PLANETARY DRIVE

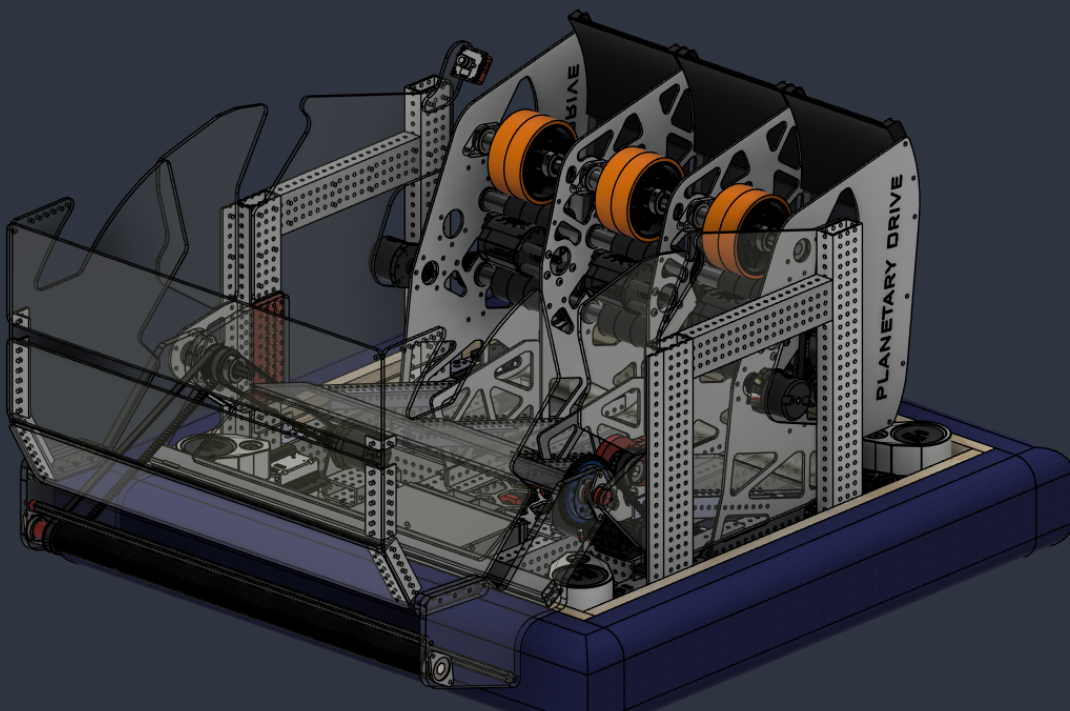

FIRST ROBOTICS COMPETITION TEAM 2856

LEXINGTON, KENTUCKY

PARTNERSHIP MATERIALS

SPONSORSHIP OVERVIEW

Support the students, tools, travel, and iteration behind the robot.

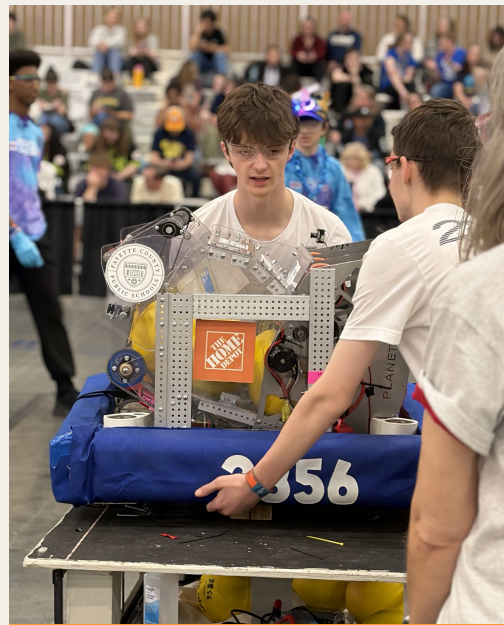

ABOUT THE TEAM

A student team with real deadlines.

Founded in Lexington in 2009, Planetary Drive is FIRST Robotics Competition Team 2856. Fayette County high-school students design, build, and program a new competition robot each season.

Students lead the day-to-day work. Mentors teach safe practice, share technical experience, and help the team manage the registration, travel, and logistics required to compete.

STUDENT ELIGIBILITY

OUR MISSION

Make room for students to learn by doing.

Planetary Drive gives students a place to apply classroom knowledge to a real machine. The work develops critical thinking, collaboration, creativity, perseverance, communication, and leadership because the team needs those skills to solve the problem in front of it.

WHAT IS FRC?

FIRST Robotics Competition challenges high-school teams to solve a new game each year by designing, fabricating, programming, and driving a full-size robot. Teams compete hard while sharing knowledge, parts, and help across the community.

WHAT SUPPORT ENABLES

A season is built from practical needs.

Needs change with each game, but these categories remain central to building a robot and giving students a complete competition season.

01 Competition registration A place to put months of engineering work on the field.	02 Travel and lodging Transportation for students, mentors, tools, and the robot.
03 Raw materials Metal, sheet goods, fasteners, and fabrication stock.	04 Electronics and parts Motors, sensors, controllers, wiring, and standard components.
05 Tools and upgrades Reliable tools, replacement parts, and targeted improvements.	06 Outreach Materials that help students share the work with the community.

Financial and in-kind support are both useful.

Materials, parts, supplies, tools, equipment, and professional services may fit current needs.

STUDENT IMPACT

What students take with them.

Sponsor support gives students the time, tools, and access to develop skills through the real work of building and competing.

01

Programming

- Java and WPILib
- Testing and debugging
- GitHub and team workflows

02

Engineering

- CAD and mechanical design
- Fabrication and safe shop practice
- Electrical systems and wiring

03

Teamwork

- Problem-solving under deadlines
- Communication and leadership
- Outreach and organization

PARTNER WITH THE TEAM

Start with a conversation.

The team can confirm its current priorities, answer questions about financial or in-kind support, and discuss current recognition opportunities directly.
